GPS INVENTORY SOLUTIONS, INC.

A profitable solution for unprofitable inventory

LONG-TERM INVENTORY MANAGEMENT SOLUTIONS YOU CAN BANK ON

THE CORPORATE INVENTORY CHALLENGE: SYNERGIZING OBJECTIVES

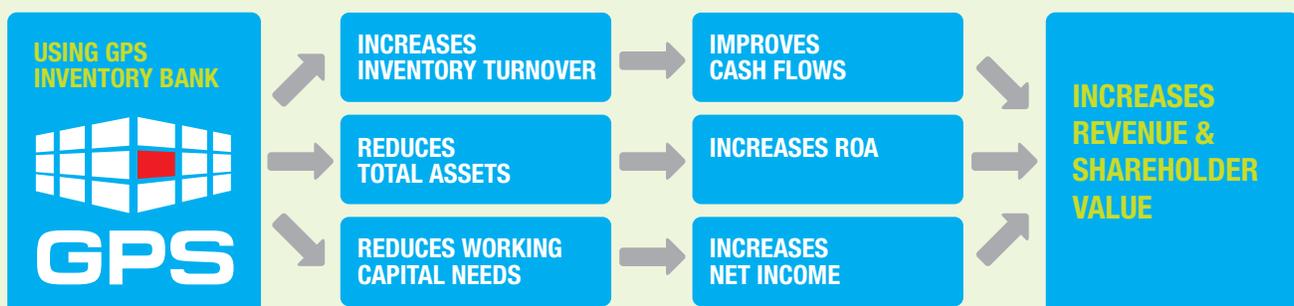

All companies are composed of conflicting needs and objectives. Manufacturing thrives on large, economical production runs that essentially increase inventory. Sales and Customer Service likewise advocate a large inventory to support its products and customers. Purchasing may want the cheapest products while Engineering may want the highest quality products.

The Finance Department, however, wants the leanest possible inventory and knows that the cost of owning excess and slow moving inventory frequently outweighs the benefits. Plus, Finance understands that reducing this inventory will have a positive impact on corporate financial statements.

Many CFO's have realized that by reducing their inventories, they are reducing their need for working capital. This improves cash flows and reduces their need for outside capital, which is especially beneficial during a difficult financial market.

GPS Inventory Solutions, Inc. provides cost effective solutions that not only reduce overhead and operating costs but also have a positive impact on profits and shareholder value.

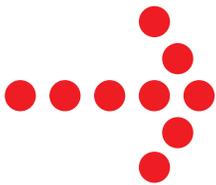

Inventory Reductions Drive Profitability and Shareholder Value

OPTIMIZES YOUR INVENTORY REDUCTION INITIATIVES

Why Scrap Future Product Demand?

Scrapping inventory is often a short term solution to a long-term problem. Approximately 30% of the excess inventory you scrap today will be in demand tomorrow by your customers. Unfortunately, the small annual sales generated over the next decade will probably not justify its ownership costs. GPS Inventory Solutions offers a way to eliminate these ownership costs while still retaining inventory availability.

The GPS Inventory Bank

When you scrap excess and slow moving inventory, it is gone forever; but when you deposit your inventory into the GPS Inventory Bank, you eliminate the expense of ownership while preserving the availability of each part.

Thru this program, GPS purchases your excess and slow moving inventory in bulk. As the new owner, GPS transports the inventory from your warehouse to its high-density, long-term storage facilities. After GPS receives, inspects and processes the inventory, the goods remain there until each part is no longer in demand – which is usually a number of years.

Immediate Parts Availability Enhances Your Customer Service

Now you have the advantage of providing customers with a larger selection of parts with no long lead times. All orders ship from our Inventory Bank within 24 hours of receipt. Same day shipping is available for most orders.

GPS processes sales thru your systems in order to maintain and monitor your quality standards and assure complete customer satisfaction. Since GPS customizes its parts marketing to each manufacturer's needs, your customers have access to single hard-to-find items as well as emergency shipments.

Reduce Inventory and Generate More Profits

- Using the Inventory Bank provides manufacturers with reduced inventory carrying costs while increasing their available warehouse space for more productive products.
- Increased parts availability thru the Inventory Bank enhances Customer Service and provides long term support for your products.
- Unlike surplus outlets, your brand identity and market integrity is protected by using the Inventory Bank program.
- Working capital and other resources become available to support more profitable activities or new corporate initiatives.

A profitable solution for unprofitable inventory

Our GPS Inventory Bank reduces your inventory carrying costs while providing long-term product support to maintain the high level of customer service required in today's competitive market.

We partner with manufacturers to reduce their inventories, increase productivity, enhance customer service and streamline their supply chain activities while ultimately increasing profits and shareholder value.
